CHAPTER ONE

1.0 INTRODUCTION

The consumption of electricity (light) is inevitable in the life of a man to the extent that electricity is regarded as one of the basic necessities of life.

Tracing the origin of light to the time God created light knowing fully well that his target of creating man cannot be achieved without light.

As we know, light is gotten from electricity and its usefulness to man is enormous both in consumption, reserves, and exploration. It makes all human Endeavour meaning, possible and successful.
